

EuroITV 2005

EUROITV 2005

3rd European Conference on Interactive Television:

User Centred ITV
Systems, Programmes and Applications Aalborg University, Denmark,

Wednesday
March 30 – Friday April 1 2005

Following on from the successful EuroITV 2003 and EuroITV 2004, this conference on production and consumption of interactive television and cross media usage and development will bring together ITV developers, HCI practitioners, market researchers, academics and industry researchers to share their experiences and knowledge. It will be an excellent opportunity to explore the research issues raised by interactive television in a wide range of domains, e.g., entertainment, games, commerce, health, and education. We welcome delegates from all areas of academia, the TV industry and user organizations.

Now in its 3rd year, this European conference is becoming a well-respected event dedicated to the research, developments and applications related to interactive television. EuroITV started in 2003, had a successful second convocation in Brighton last year, and looks to be a permanent forum for emerging ITV issues. It is slanted towards addressing the concerns of ITV applications and issues as opposed to strictly formal technical topics.

The general format for the conference will have keynote addresses focusing on practical, future challenges, invited speakers talking about the immediate issues to be faced in each of the major conference threads they represent; and tutorials, full papers, short papers, and posters, all giving an excellent picture of current advanced practice in the variety of application areas of concern.
